

3ª ed. 2012. Resumen de Posiciones

Se publica la tercera edición de los '[Rankings I-UGR de las Universidades Españolas según Campos y Disciplinas Científica 3ª ed. 2012](#)' (denominados en las anteriores ediciones como 'Rankings ISI'). Se trata de un ranking de universidades públicas y privadas españolas basadas en la investigación publicada en las revistas internacionales de mayor impacto y visibilidad. El objetivo principal de estos rankings es descubrir las fortalezas y debilidades del sistema universitario español de investigación en diferentes ámbitos del conocimiento.

Este ranking se diferencia de otros en cuatro aspectos: 1) Se ofrecen rankings para 12 campos y 37 disciplinas científicas de manera que pueda captarse mejor en qué especialidades son más influyentes las universidades. 2) Las universidades se ordenan según el IFQ²A-Index, que sintetiza 6 indicadores bibliométricos de producción e impacto. 3) Emplea como fuente de información las bases de datos de Thomson-Reuters, referencia básica de las agencias de evaluación como CNEAI o ANECA. 5) Se utilizan series temporales amplias; un periodo de cinco años (2007-2011) y un periodo de diez años (2002-2011).

Asimismo no todas las universidades figuran en los rankings, tanto en campos como en disciplinas antes del cálculo del IFQ²A-Index se establece un primer corte: solo figuran aquellas que cuentan con unos umbrales mínimos de producción científica (NDOC). En el caso de los campos la regla general es que las universidades que se sitúan en el 4º Cuartil según NCDQC se excluyen, es decir se escogen solo aquellas situadas a partir del 3^{er} Cuartil. En el caso de las disciplinas o bien se incluyen aquellas situadas a partir del 2º Tercil o bien aquellas situadas a partir del 1^{er} Tercil dependiendo de las características y fiabilidad de los diferentes indicadores en cada una de las disciplinas. [Más detalles](#).
